

# My Scenic Companion

Using Scenic with Nerves to create  
some fun automation for everyday use

Jason Axelson (@bostonvaulter)  
Elixir Conf 2021 • Austin, TX  
October 12, 2021

## About me

- Developing in Elixir professionally since 2016
- ElixirLS Core Team member since 2019
- Also help maintain a few other projects

## About me

Senior Software Engineer at Felt  
We're hiring Elixir Developers!

Felt

[felt.com](https://felt.com)

[@felt on Twitter](https://twitter.com/felt)

# ElixirConf 2018

- My first ElixirConf!
- Lots of great talks
- Met people from the community
- Attended an awesome Nerves training
  - Received Raspberry PI 3B+ and a touch screen
- Witnessed the release of Scenic
  - A Graphical Framework for Elixir

# The Possibilities

When I got home I kept thinking about what I was going to build with my RPi?

So I started thinking of  
“problems” to solve

But first,  
a confession

## Problem 1:

It's hard to pause my music

- I use pianobar — a command line client for Pandora.com
- I also use multiple computers with a single keyboard and mouse

# Problem 1: It's hard to pause my music

My desktop is often a mess

=

Hard to pause command line  
music player

## Problem 2: My day is not structured enough

## Problem 2:

My day is not structured enough

I like the Pomodoro  
Technique

## Problem 2:

My day is not structured enough

But I don't like any Pomodoro Timers

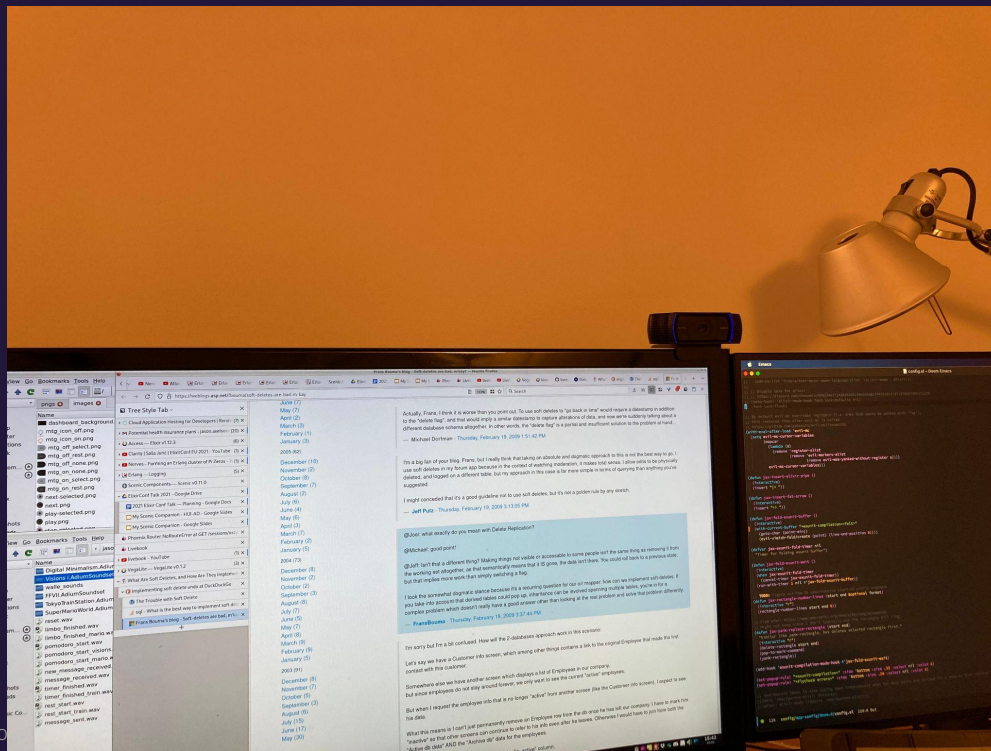

## Problem 3:

My “coworker” doesn't know when I’m in a meeting

# Problem 3: My “coworker” doesn’t know when I’m in a meeting

## Can you tell if my camera is on?

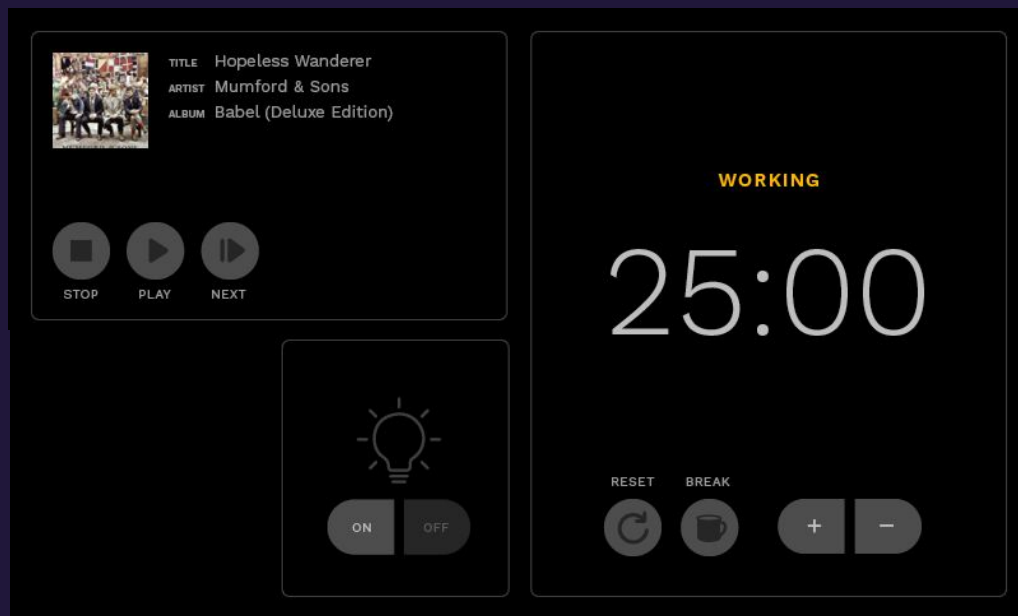

# Solution: Build My Scenic Companion

## Solutions:

1. Pianobar Interface

2. Pomodoro Timer

3. Meeting Indicator Light

## So what? Why build this?

- It's empowering to build software for yourself
- Less context switching
- Elixir is a good platform for home automation
- I had the hardware so may as well do something with it

# Hardware Diagram

## Hardware:

- RPi 3B+
  - Built-in bluetooth module
  - Govee LED Bulb
- Official RPi 7-inch touchscreen

# Where does it live?

# How does this fit into my overall home office?

Govee LED Light

Scenic Companion

Work Laptop

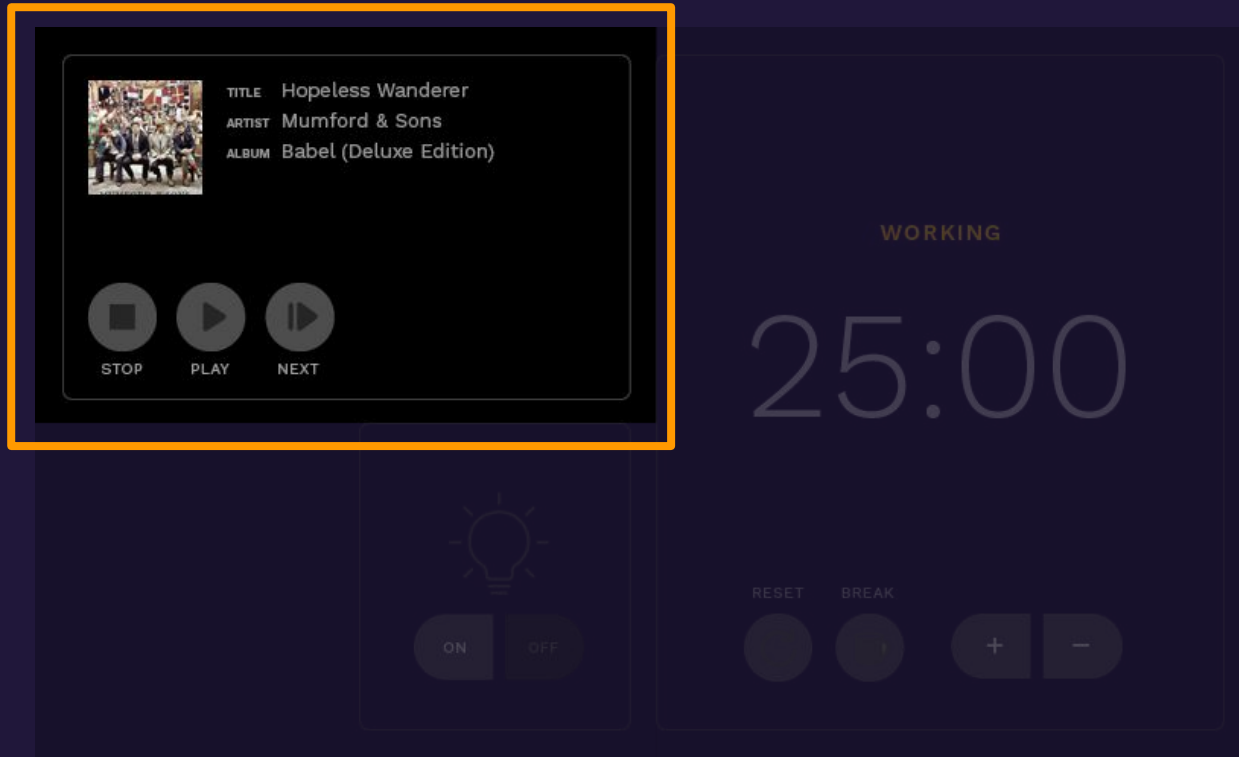

Personal Desktop

*Not pictured: the huge mess of wires under my desk*

SOLUTION 1

# Pianobar Interface

SOLUTION 1

# Pianobar Interface

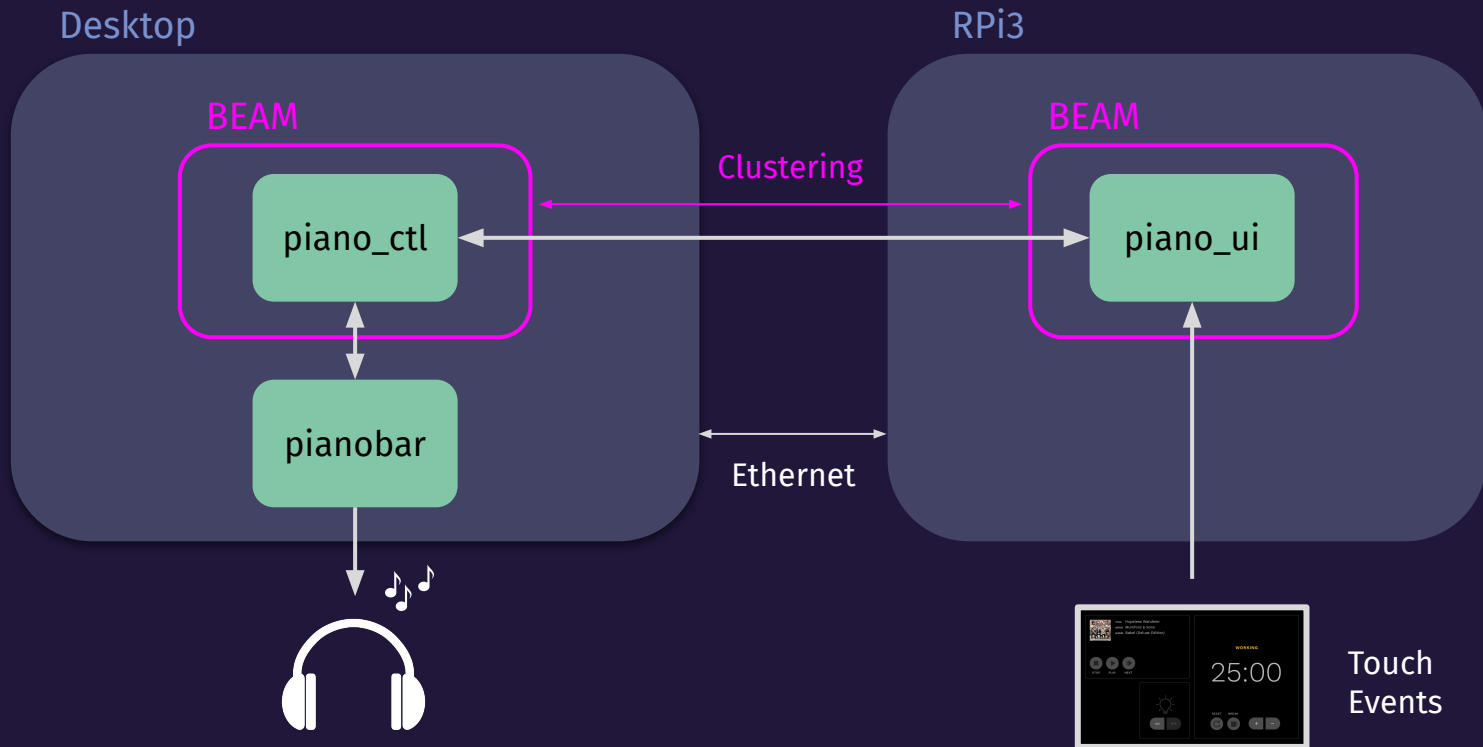

- Controls
  - Stop, Play, Next
- Interfaces Pianobar command line client

SOLUTION 1

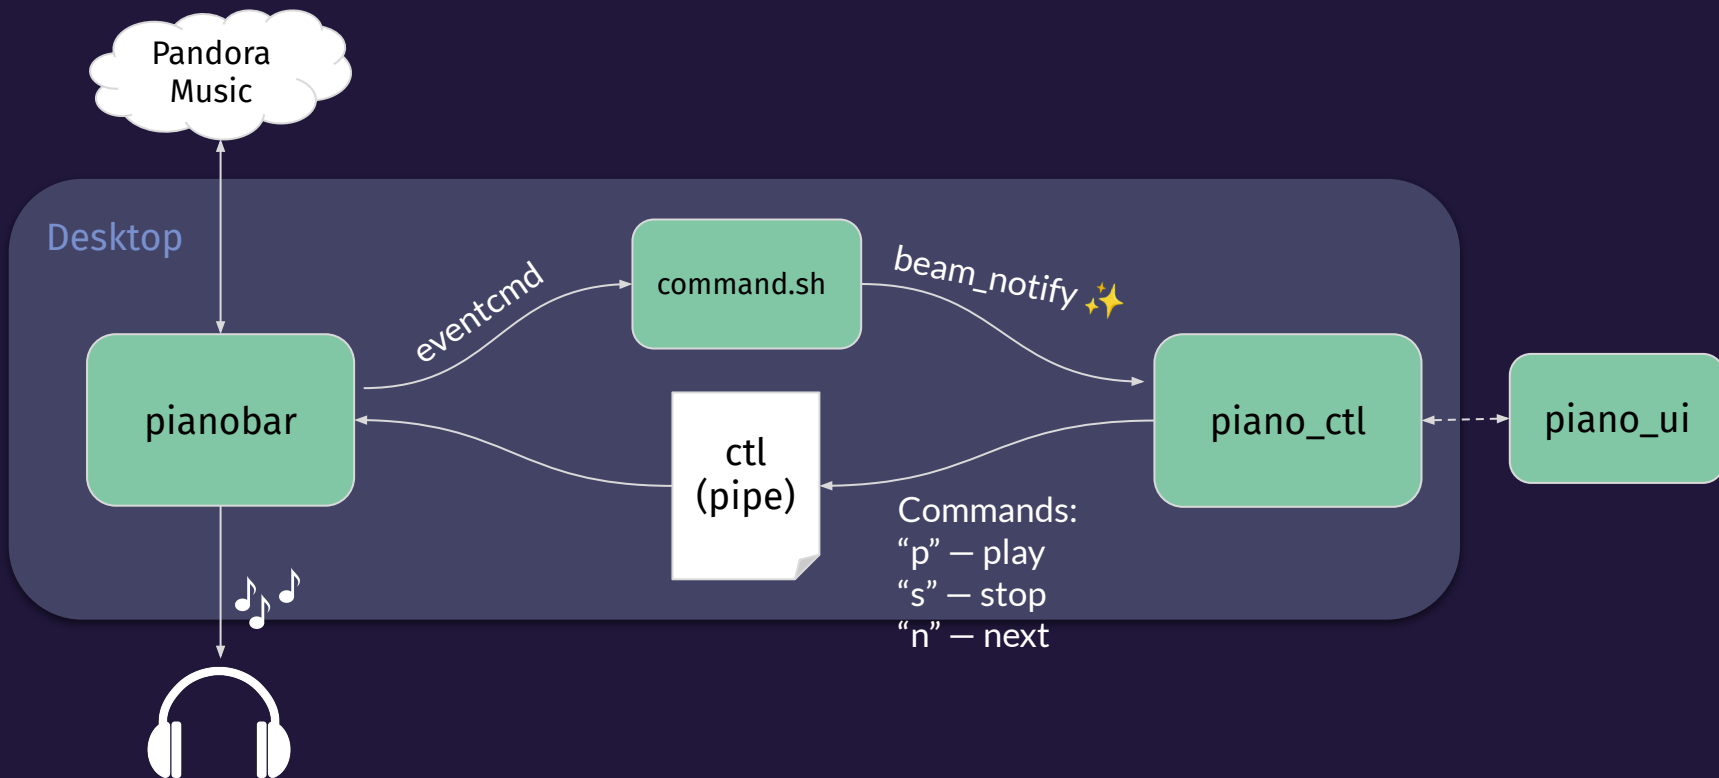

# Pianobar Interface

SOLUTION 1

# Pianobar Interface & ctl

SOLUTION 1

# Pianobar Interface: Interesting Code

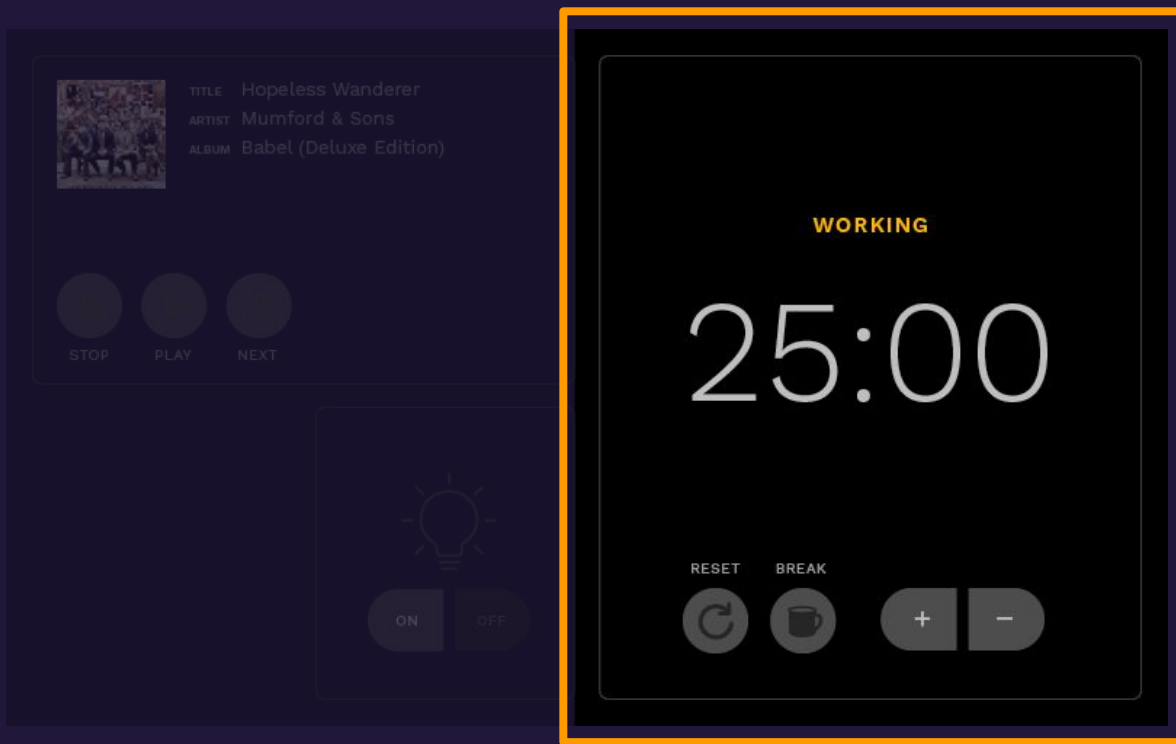

- `PianoUi.Scene.Dashboard`
- `ScenicContrib.IconComponent` (in launcher)
- `PianoUi.FileCache`

SOLUTION 2

# Pomodoro Timer

SOLUTION 2

# Pomodoro Timer

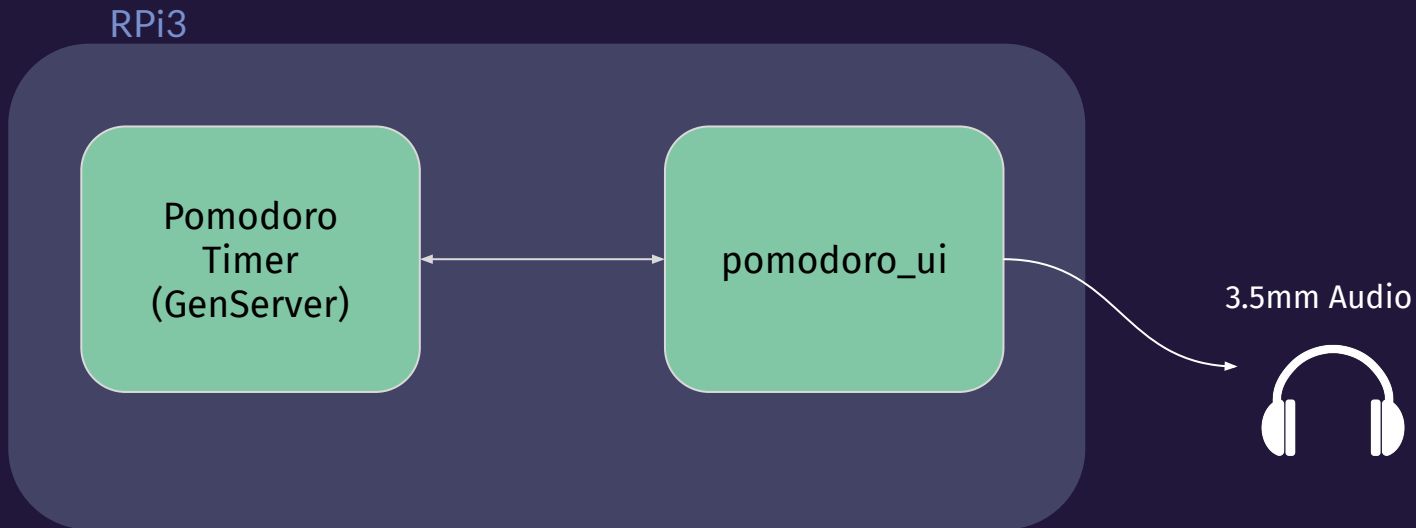

- Configurable on the fly
- 25 minutes on, 5 minutes rest
- Limbo mode
- Reminds me to take regular breaks
- Plays sounds for transitions
- Logs to an sqlite database

SOLUTION 2

# Pomodoro Timer: System Diagram

SOLUTION 2

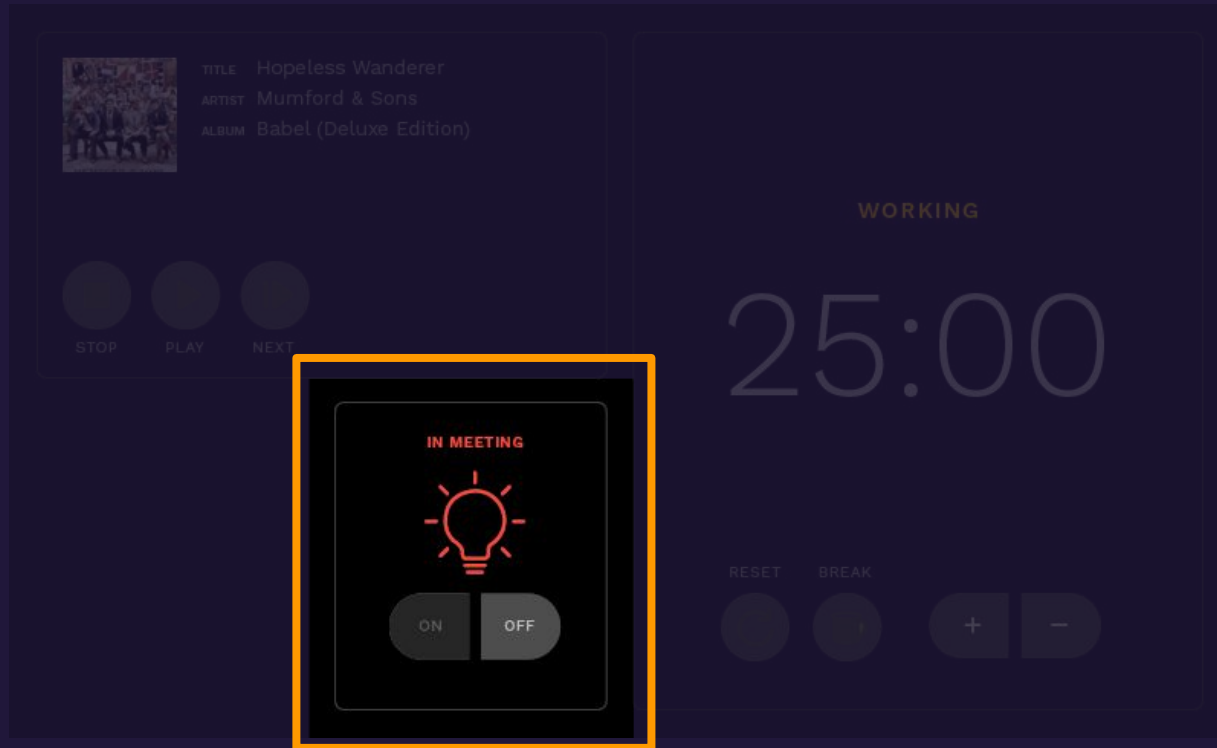

# Pomodoro Timer: Interesting Code

- `Pomodoro.SoundPlayer`
- `ScenicUtils.ScenicRendererBehaviour`
- `Pomodoro.PomodoroTimer`

SOLUTION 3

# Meeting Indicator Light

SOLUTION 3

# Meeting Indicator Light

Light is off

SOLUTION 3

# Meeting Indicator Light

The Meeting Light  
lets my “co-worker”  
know that  
I’m on a call

SOLUTION 3

# Meeting Indicator Light

When I finish a call,  
I turn the light off.

It flashes green then  
fades off.

SOLUTION 3

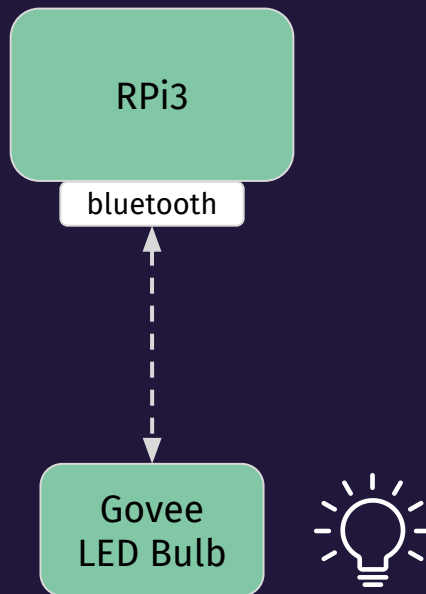

# Meeting Indicator Light: Diagram

## Hardware:

- RPi 3B+ Built-in bluetooth module
- Govee H6001 LED light (~ \$13)

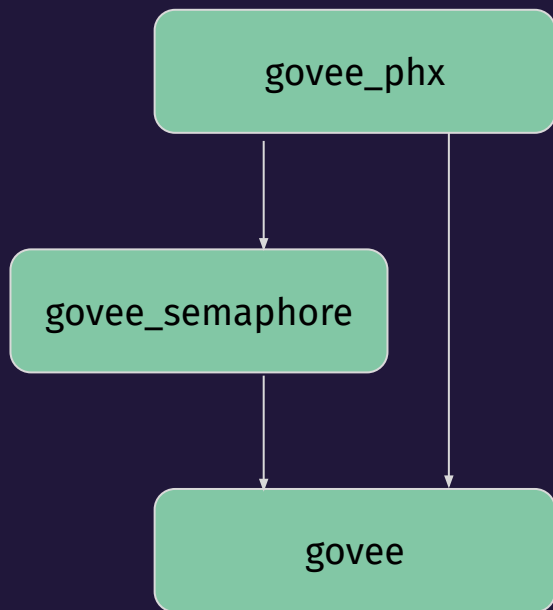

## Uses the Blue Heron library

- Supports BLE (Bluetooth Low Energy)
- Originally created by SmartRent

# Meeting Indicator Light: Applications

Composed of three applications:

- govee\_phx: Phoenix Interface
- govee\_semaphore: Controls timing and colors
- govee: low-level library to communicate with the light

SOLUTION 3

# Meeting Indicator Light: Interesting Code

- `Govee.ShadesOfWhite`
- `Govee.CommonCommands`
- `GoveeSemaphore.Server`

## Bonus: Asteroids!

- No practical use

## Bonus: Nerves Livebook!

The screenshot shows the Nerves Livebook interface. At the top, it says "Simple Demo" with a three-dot menu icon. Below that is a "Section" header. There is a "Reevaluate" button with a play icon, and several utility icons: a link icon, a settings gear, an up arrow, a down arrow, and a trash can. The main area contains a code cell with the number "1" on the left, the code `IO.puts("Hello ElixirConf!")` in the center, and the word "Evaluated" with a green dot on the right. Below the code cell, the output "Hello ElixirConf!" is displayed in a light gray box. At the bottom of the output area, there is a blue ":ok" message.

Yes, it is running on my device  
alongside everything else!

*(sorry, this address won't work for you)*

# About Scenic

- Built by Boyd Multerer
- Released during ElixirConf 2018 (I was there!)
- Targets IoT and desktop devices that require interfaces
- Will be part of Kry10 Operating System
- Currently undergoing a large v0.11 update/rewrite

# Why is Scenic cool?

---

MY BELIEF:

*As developers we should have other options to build interfaces besides web-based technologies.*

---

## Why Scenic?

- Scenic + Nerves size < Electron minimum size
- Scenic is robust against errors and provides nice primitives
- Scenic helps you build composable UI's

*Note: Scenic + Nerves is an entire operating system*

There was a suspicious  
number of arrows pointing  
at your headphones

# Audio Setup

Audio Mixer

# Audio Setup

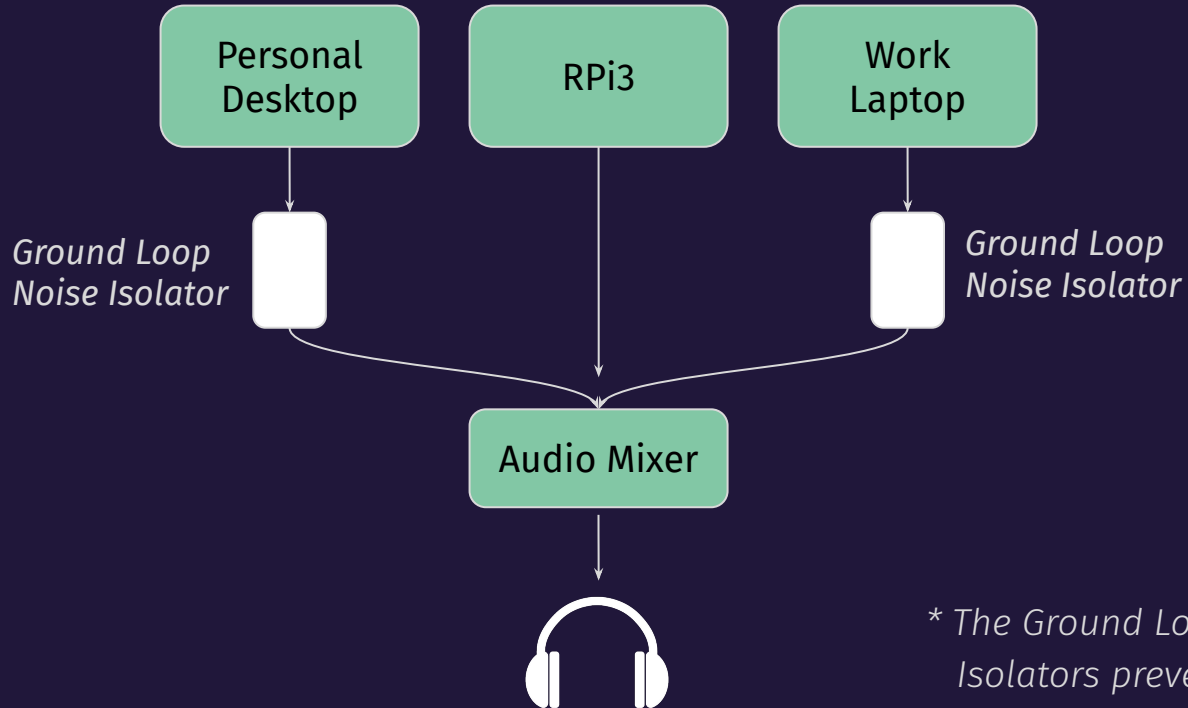

4-Channel Line Mixer

I love analog interfaces!

*Overkill? Who cares?*

# My Audio Hookups

*\* The Ground Loop Noise Isolators prevent static noise*

## Recap

- I had fun building software using hardware I had on hand
- Improved workflow: less context switching
- I use it every day

## Challenges

- Can be a lot of work to manage the mess of dependencies
- All applications must run on a single BEAM instance
  - Therefore only one version of each library can be used (e.g. Phoenix)
- Managing Elixir configuration across many repositories is a chore

## Future Work

- Auto-sleep the screen
- Auto-pause music after no interaction for X hours
- Shared state for piano\_ctl/piano\_ui
  - instead of ad-hoc messages
- Come up with an excuse to use Membrane

My Scenic Companion Can  
Become Your Scenic Companion

# These are all the repos

- [https://github.com/axelson/piano\\_ex](https://github.com/axelson/piano_ex)
- <https://github.com/axelson/pomodoro>
- <https://github.com/axelson/govee>
- [https://github.com/axelson/govee\\_phx](https://github.com/axelson/govee_phx)
- [https://github.com/axelson/govee\\_semaphore](https://github.com/axelson/govee_semaphore)
- [https://github.com/axelson/scenic\\_launcher](https://github.com/axelson/scenic_launcher)
- [https://github.com/axelson/scenic\\_asteroids](https://github.com/axelson/scenic_asteroids)
- [https://github.com/axelson/scenic\\_live\\_reload](https://github.com/axelson/scenic_live_reload)

It's all opensource

## Libraries Used - Thank You Maintainers!

- **Scenic** — Primary graphical interface library
- **Nerves** — Runs the BEAM on the RPi
- **blue\_heron** — Bluetooth Low Energy (BLE) to control Govee light
- **beam\_notify** — Receive the pianobar eventcmd output and read into the BEAM
- **ecto\_sqlite3/exqlite/ecto** — SQLite database to track Pomodoros
- **finch** — Fetch Pandora album art
- **Phoenix** — Web interface for GoveePhx and LiveBook
- **sched\_ex** — Timing loop for Asteroids
- **pid\_file** — used in pianobar eventcmd script to check if piano\_ctl is running
- **muontrap** — Calls aplay to play sounds for pomodoro
- **vega\_lite and Kino** — Creates graphs in Livebook
- **boundary** — Helps to define boundaries between areas
- **credo** — Enforces styles
- **master\_proxy** — serve multiple Phoenix applications on the same port

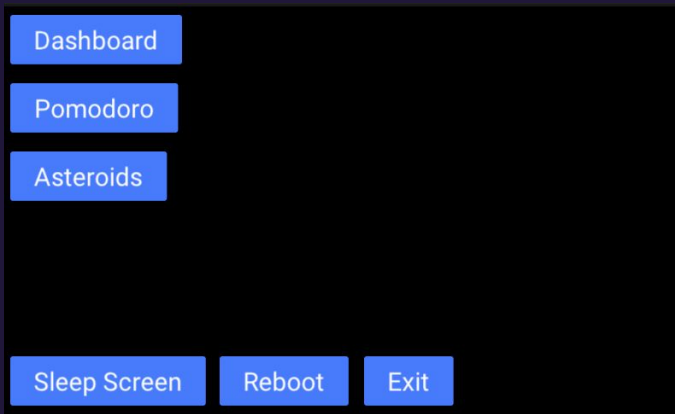

Thank You!

Questions?

## This is the launcher screen

## This is driven by code!

```
config :launcher,  
  scenes: [  
    {"piano_ui", "Dashboard", {PianoUi.Scene.Dashboard, []}},  
    {"pomodoro", "Pomodoro", {PomodoroUi.Scene.Main, []}},  
    {"asteroids", "Asteroids", {Play.Scene.Splash,  
      Play.Scene.Asteroids}}  
  ]
```

The offsets for each button are dynamically calculated
